INCREMENTALITY TESTING, TO DRIVE NEW DOWNLOADS

Amazon Shopping is the largest online retailer in the United States.

We have been working with Amazon Shopping in the USA since 2011.

Headquartered in Seattle, the retailer is the most popular online marketplace used by both individual as well as businesses

In 2021, Amazon surpassed Walmart as the world's largest retailer outside of China. Growth was driven in large part by its paid subscription plan, Amazon Prime, which has over 200 million subscribers globally.

CAMPAIGN APPROACH

amazon

THE OBJECTIVE:

Our goal was to acquire new users through new downloads & in-app activity. For example, we were aiming to increase reach by tapping onto open exchange, buying on a Cost per Impression (CPM), and measuring the impact of impressions to drive install & down funnel actions.

THE CHALLENGE:

The client wanted to gain a deeper understanding of the impact of an ad view on users behaviour.

OUR APPROACH:

- ✓ We segmented users into a control group or an exposed group using top DSPs selected for their in-app inventory.
- ✓ A control group was shown non branded ads whereas the exposed group was shown branded ads.
- ✓ We monitored installs which were attributed to both control & exposed groups, calculating the incremental lifts generated by the branded ads.
- ✓ After a full 30-day attribution window, we analysed incremental lift per day after the impression.
- ✓ Finally, we tested statistical significance of the dataset in order to validate results.

WHAT WE DID

HOW WE CONDUCTED INCREMENTALITY TESTING

amazon

Users were automatically segmented into either a “control” group or “exposed” group by the DSP.

Control group users only saw ads from the charity, whereas test group users only saw branded ads. Aside from creative, all other variables were equal between the groups.

Any app downloads attributed to the control group were considered organic as those users were not exposed to branded advertising.

The difference in conversion rate between the exposed and control groups represent the true impact of the campaign.

CONTROL GROUP

EXPOSED GROUP
