WE ARE M&C SAATCHI PERFORMANCE

WE CONNECT YOUR BRAND TO TODAY'S CONNECTED CONSUMERS

M&C SAATCHI PERFORMANCE

AUDIBLE,

THE LARGEST AUDIOBOOK PLATFORM

audible
an amazon company

Audible is a digital audiobook and podcast platform, owned by Amazon, where users can purchase individual pieces to listen, or subscribe for monthly credits. While available globally, it is also the largest audiobook producer and retailer in the United States.

M&C Saatchi Performance have worked with Audible for many years across digital channels and as with all our clients, continually test & learn to ensure we are delivering the most efficient campaigns.

With the ‘black box’ nature of Google’s App Campaign, we wanted to validate high investment in this channel through incrementality analysis to ensure trials driven were truly due to spend on Google.

CAMPAIGN APPROACH

THE OBJECTIVE:

Drive scalable user acquisition for Audible in Canada through Google properties. Success measured on a cost per trial basis.

OUR APPROACH:

- ✓ **We conducted incrementality testing through a split geo test** to analyse the difference in how many trials were driven as a base line vs how many were driven through Google.
- ✓ **We kept all other factors constant** and in line with typical campaign running to allow the gathering of clean results.
- ✓ **We kept spend levels** closely aligned with typical levels while also ensuring significance levels would be reached over the course of the 2-weeks campaign

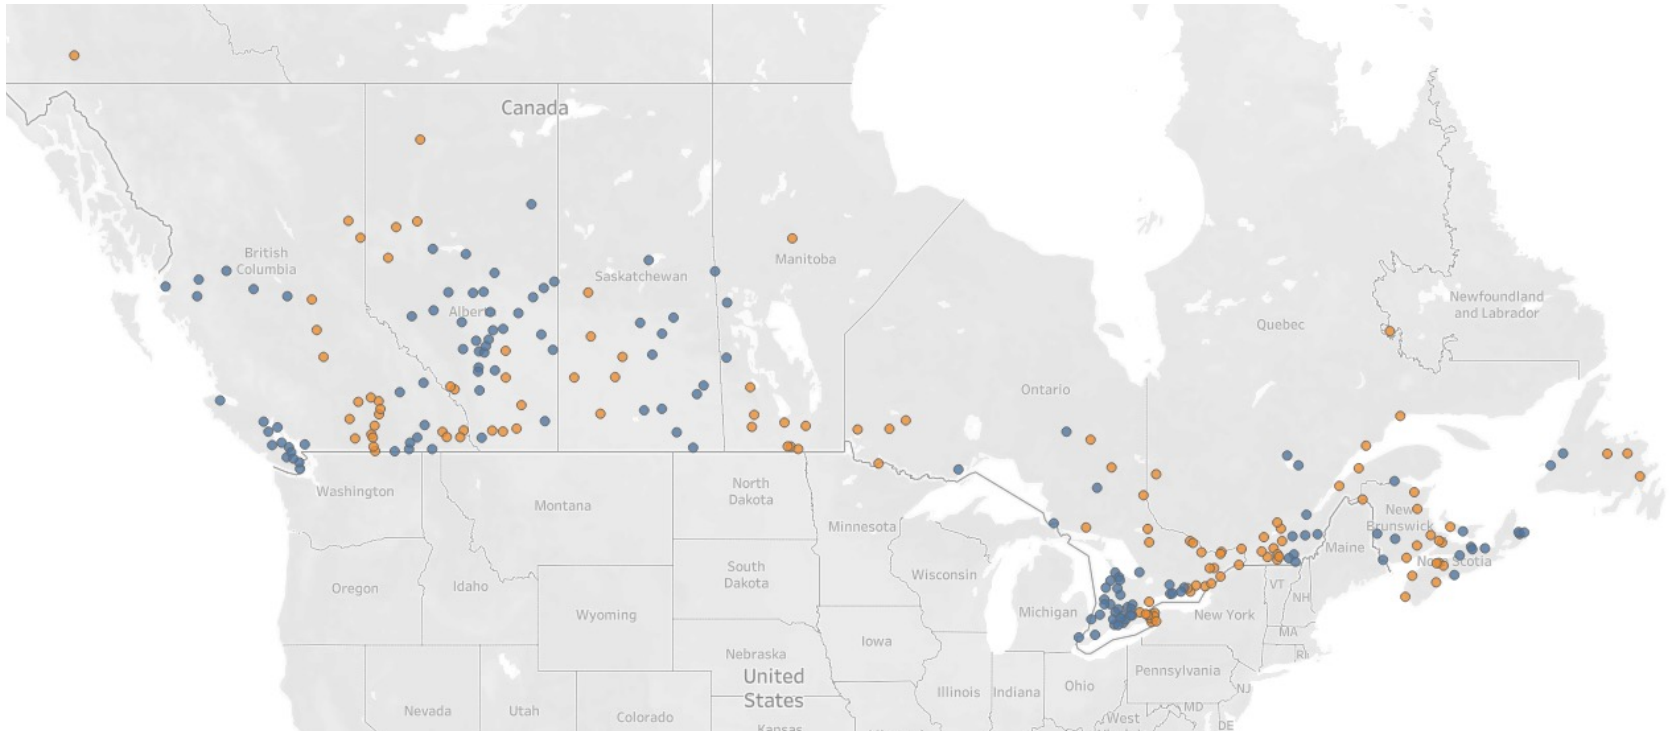
INCREMENTALITY TESTING ACROSS CITIES

audible
an amazon company

To ensure the incrementality of Google App Campaigns we optimized campaigns on an in-app event of a user taking out a free trial. The incrementality testing was carried out through randomized Geo split testing. The Canada market was broken out into 2 groups of cities, one group was delivered ads from Google App Campaign as usual, while the other group was excluded from the campaign as a holdout or control group.

CITIES SPLIT IN TREATMENT VS. CONTROL



Control cities saw a drop off in trials, which overall accounted for a 17% lower volume of trials.
