POKEMON GO CASE STUDY:
FULL FUNNEL ACTIVATION

M&C SAATCHI PERFORMANCE

POKEMON GO

Pokémon Go is one of the leading augmented reality mobile games developed and published by Niantic in collaboration with The Pokémon Company for iOS and Android devices.

To support its latest game release, M&C Saatchi Performance was tasked with developing a full-funnel campaign that drove uplifts in daily active and new users.

The challenge lay in optimising the campaign without having access to attribution data in absence of an MMP.

Results driven between 10/16/2018 – 12/31/2018

STRATEGY

OBJECTIVE: INCREASE DAILY ACTIVE USERS

- ✓ Execute a full-funnel campaign around new product releases
- ✓ Deliver an uplift in daily active users and an increase in new user accounts

CHALLENGE: ABSENCE OF AN MMP

Although the Facebook SDK was implemented, in the absence of an MMP, there was a lack of visibility through to DAU to aid optimization. Therefore a proxy indicator for performance had to be analysed to drive efficient growth.

OUR APPROACH:

- ✓ We conducted video A/B testing across Instagram to gather clean results
- ✓ We utilized technology to magnify the traditional TV and cinema buys - connected TV and DOOH executions were aligned with broadcast schedules
- ✓ We upweight platforms where it was possible to track through to install (e.g. Facebook, Instagram, codeless Android tracking across DV360 / Google App Campaign)
- ✓ Within the prospecting pool, targeting was overlaid to reach 13-34 year olds, skewing male
- ✓ Across social and programmatic, we targeted users interested in VR and Player vs Player opportunities

M&C SAATCHI PERFORMANCE

OUR APPROACH

FULL FUNNEL MARKETING

A full funnel strategy was utilized to increase users.

Channels such as Connected TV (CTV), Digital Out of Home (DOOH), retargeting & testing enabled the campaign to be highly targeted

DRIVING AWARENESS

DOOH campaigns were targeted to Shopping malls and Sports Entertainment venues where gamers frequently visit and were evaluated by Click Through Rate (CTR).

A/B TESTING

We launched across Instagram to garner results where the placement was less cluttered. This derived cleaner isolated results that could then be rolled out across all channels as the campaign scaled up. We utilized Instagram's A/B split testing functionality to conduct even and random delivery to each audience segment, for clean and significant results.

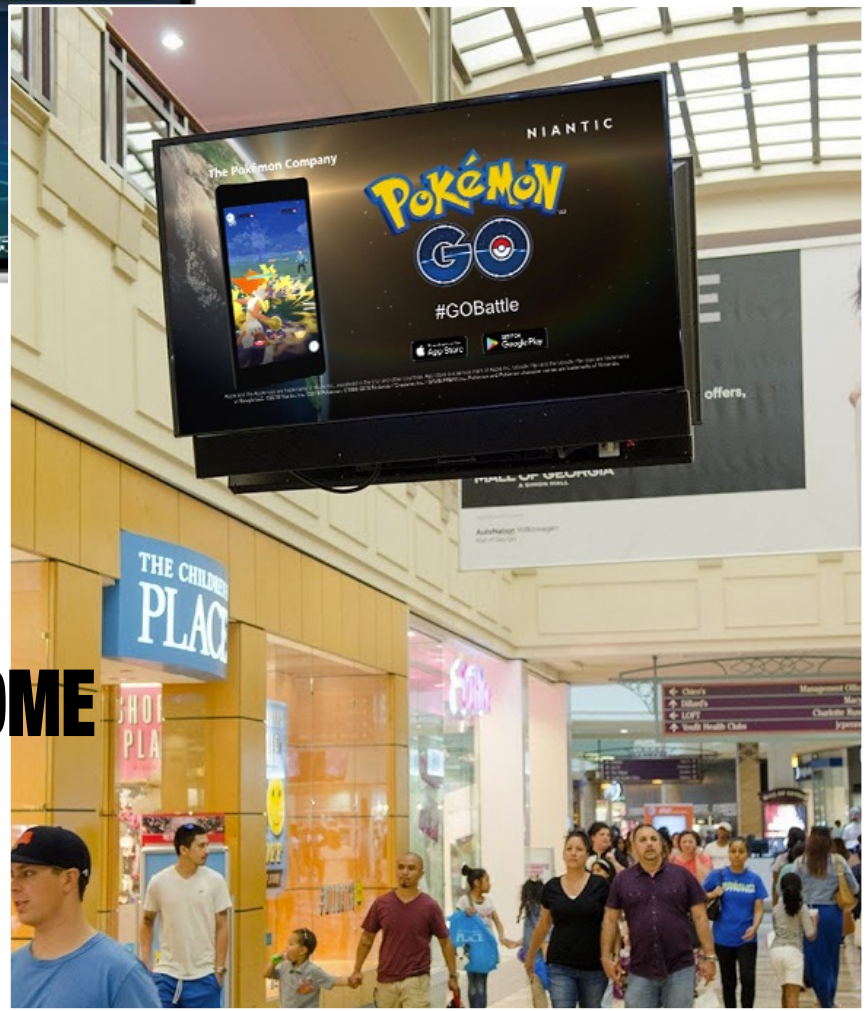
EXAMPLE PLACEMENTS

CONNECTED TV

DIGITAL OUT OF HOME



FULL FUNNEL EXECUTION

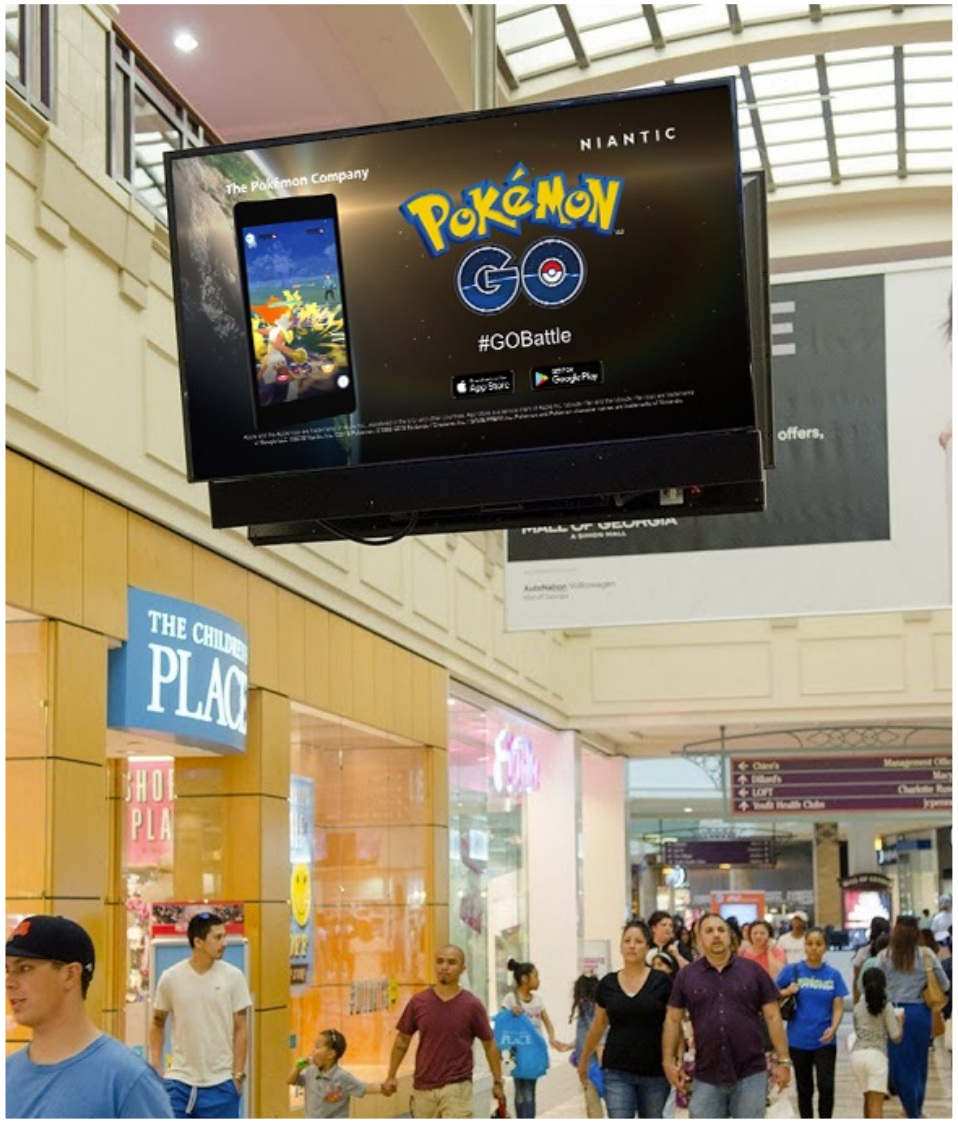
AWARENESS CAMPAIGNS:

In addition to trackable acquisition channels, awareness campaigns were launched to reach new audiences meeting the Pokémon user profile. Users who interacted with the awareness campaigns were then fed into retargetable buckets to drive them down funnel to install the app.

DIGITAL OUT OF HOME (DOOH):

DOOH campaigns were targeted to Shopping malls and Sports Entertainment venues where gamers frequently visit and were evaluated by CTR.

DOOH results showed malls and Sports Entertainment venues, New York and Atlanta DMAs and between 12-1pm were most effective in driving results. ***Male users saw a twice as high CTR as females with those aged 18-24 seeing up to a 1.5x improved CTR as other groupings.***



M&C SAATCHI PERFORMANCE

A/B VIDEO TESTING ACROSS INSTAGRAM

We launched across Instagram to garner results where the placement was less cluttered. This derived cleaner isolated results that could then be rolled out across all channels as the campaign scaled up. We utilized Instagram's A/B split testing functionality to conduct even and random delivery to each audience segment, for clean and significant results.

A/B TESTING FINDINGS:

Of the isolated factors tested, while variations in ad copy did not play a significant role in performance, we found video length was key in impacting metrics.

The 10 second videos were shown to drive the most installs through improved CTR, impression-install CVR and CPI. 6 second videos were shown to also drive strong performance as compared to 20 and 30 second clips. ***As a direct consequence we prioritized shorter video lengths across the other channels being rolled out.***

M&C SAATCHI PERFORMANCE

FULL FUNNEL EXECUTION

CONNECTED TV (CTV):

Connected TV (CTV) was run to have the same look and feel as the TV campaign, but against a highly relevant cord cutter audience.

KPIs of Video Completion Rate for CTV and Click Through Rate for subsequent retargeting were set in line with industry standards. ***Actual delivery saw a +7% VCR and +27% CTR than goal.*** *Delivery was weighted towards Los Angeles, ABC App and between 8-10pm Tuesdays and Wednesdays based on these findings.*

M&C SAATCHI PERFORMANCE

RESULTS

25%
IMPROVEMENT IN COST PER INSTALL

5%
INCREASE IN DAILY ACTIVE USERS

51%
INCREASE IN NEW ACCOUNTS
