CASE STUDY

INCREASING WEBSITE TRAFFIC FOR THE WEATHER CHANNEL

FYND

BACKGROUND: WEATHER FORECAST CHANNEL

The Weather Channel is a leading global weather forecaster. Users can track daily forecasts and receive live radar updates, storm alerts and local precipitation updates.

OBJECTIVE: INCREASE WEBSITE TRAFFIC

The Weather Channel wanted to drive increased traffic to their website.

OUR APPROACH:

To drive increased traffic to The Weather Channel's website, we started by testing which weather triggers normally drive the most traffic.

We applied 3 weather triggers which would fire when there was a weather alert across the United States nationally and assigned a relevant dynamic creative to each trigger. For example, severe storms were assigned with storm creatives and snowfall with snow creatives.

We monitored the creatives at the sub-campaign level (weather trigger) to assess their performance and scaled the best performing ones.

RESULTS:

**Oct to Dec 2022*

39%

INCREASE IN CLICK THROUGH RATE MOM

500%

HIGHER CTR FOR SNOW TRIGGER THAN PLATFORM BENCHMARK
