PINNA, DRIVING USER ACQUISITION

Pinna is an on-demand audio subscription service that reimagines children's' entertainment.

The company provides audio stories, podcasts and audio games categorized by age, genre, type of audio eg podcast, audiobook and music)

Each podcast, audiobook and music compilation on Pinna is developed and carefully curated for kids 3-12.

Our goal was to increase user acquisition through testing the impact of display vs native ads.

4-week time periods in 2020

CAMPAIGN APPROACH

THE OBJECTIVE:

Our role was to increase customer acquisition among parents and teachers in the United States.

THE CHALLENGE:

Initially, Pinna relied on social media channels to drive new subscription through basic in-feed display ads.

To increase both reach and efficiency in brand awareness, consideration and trial subscriptions, we had to understand the impact of display vs native ads.

OUR APPROACH:

- ✓ We launched native ads on Storygize, a DSP focused on native advertising & dynamic display ads on Google Display Network (GDN).
- ✓ We compared the KPI performance of native & dynamic display ads from an acquisition, considerations & brand awareness standpoint.
- ✓ Channels were tested for their strength at driving success at different parts of the marketing funnel.
- ✓ We reviewed if native ads would drive more efficient Cost per Trial (CPT) compared to display ads.
- ✓ We measured the Click through Rate (CTR) and cost per 1000/users (CPM) of display ads to see if they drove higher consideration & brand awareness compared to native.

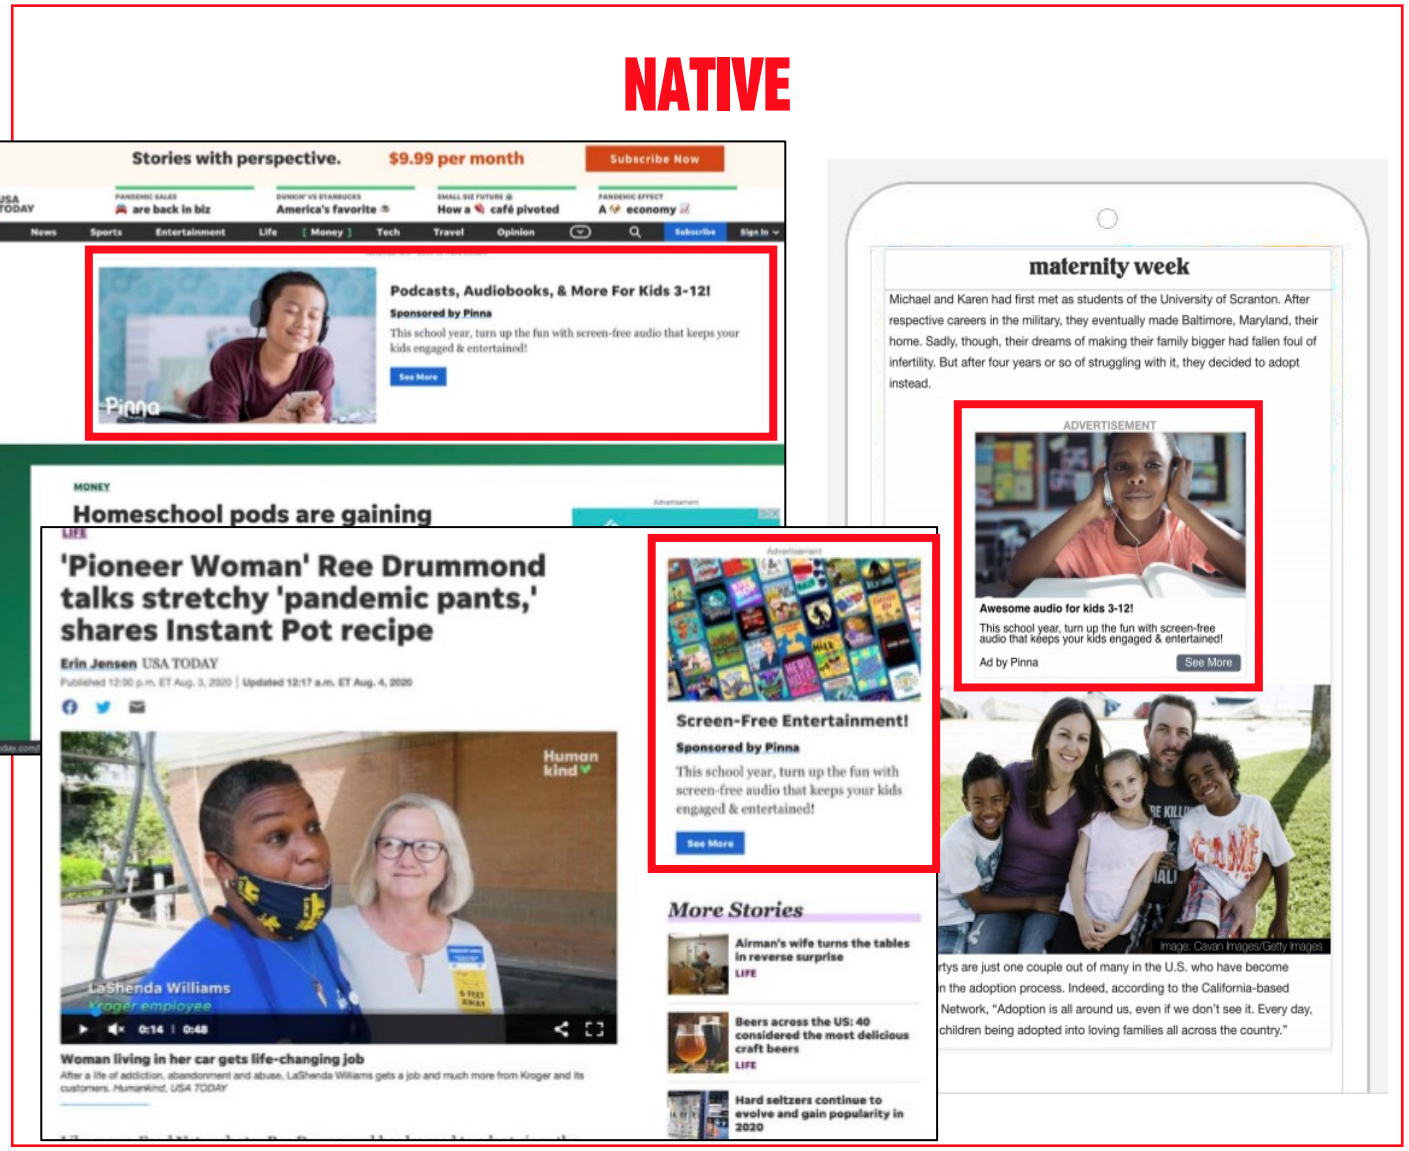
UNDERSTANDING THE IMPACT OF NATIVE VS DISPLAY NATIVE ADS



Native ads, which were served through Storygize, appeared as part of the flow of the web page on premium publishers targeting parents of young children in the US.

THE HYPOTHESIS: because these ads have a more organic feel, users are less likely to ignore them or leave the landing page, increasing efficiency of conversions at the point of purchase, or in this case, trial subscriptions.

UNDERSTANDING THE IMPACT OF NATIVE VS DISPLAY DYNAMIC DISPLAY

Display ads were responsive banners with clear logo branding and a CTA directing users to sign up for the product. They were served using Google Display Network across premium publishers targeting parents of young children. Dynamic responsive banners respond to the size of the available ad placement in real-time, serving either in-feed or interstitial ads on mobile, as opposed to a pre-determined placement for a standard size banner.

THE HYPOTHESIS: even if users close the ad instead of click through, they would get a clear idea of the product and the brand from the ad layout. Display has a more efficient reach, allowing to scale at a lower cost to the advertiser, and increase frequency and consideration.

CAMPAIGN RESULTS & LEARNINGS

8X

MORE ACQUISITION

Native ads with Storygize saw a CPT 8x lower compared to Google Display Network, demonstrating its strength at securing lower-funnel conversions.

+41%

HIGHER AUDIENCE CONSIDERATION

Display tactics on Google Display Network proved to be a stronger driver of audience consideration, yielding a CTR 41% higher than native ads.

6X

MORE EFFICIENT BRAND AWARENESS

Google Display Network was significantly more efficient than Storygize, driving a CPM 6x lower than native.

Data analysed from non-consecutive 4-week time periods in 2020: GDN from6/22-7/19, Storygize from 8/10-9/06
